

6. UI Design

UI Design

- Good UI Design will...
 - Save the user's time (3-click rule?)
 - Enable user to learn functionality
 - Decrease frustration, create good impression
- Part of UX Design
 - UX Design covers all user experience
 - e.g. UX Design for a website includes site hierarchy

Usability Heuristics

(Nielsen Norman Group)

- Communicate state clearly
 - Logged in; error, try again; loading...
- Give the user control
- Consistency
- Recognition > Recall
- Help the user

BOOKING SUMMARY

► Passenger(s)

 **London (Stansted) → Faro**
Sun, 31 Aug 2014 20:55 - 23:45

▼ **1 Adult, 29.99 GBP**

1 x Adult Fare 29.99 GBP

☒ Discount Pay by debit card: 29.99 GBP

☐ Pay by credit card: 30.59 GBP

TOTAL 29.99 GBP

Recognition vs Recall

- It is easier to recognize than to remember
 - “What is the capital of Norway?”
- Examples of recognition vs recall
 - Font selection
 - Passwords
 - Searching
 - Typing commands

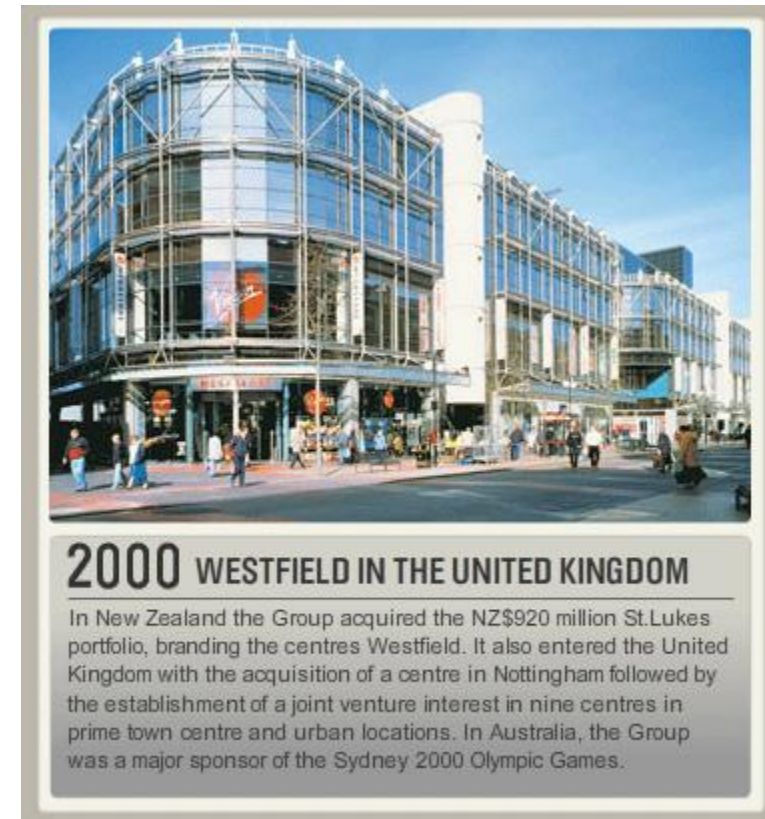

Psychology concepts

- Cognitive Load: how much effort it takes to learn to use your product
 - What are some ways to minimize cognitive load?
- Focus/attention
 - F-shaped model
- Mental models: how the user understands the UI
 - New technology can be communicated with new UI; old technology should not
 - Gestalt design principles: how the mind creates structure out of components

Focus/attention

- Example (NN Group): “When did Westfield enter the UK?”

Gestalt Principles

Good Figure

Objects grouped together tend to be perceived as a single figure. Tendency to simplify.

Proximity

Objects tend to be grouped together if they are close to each other.

Similarity

Objects tend to be grouped together if they are similar.

Continuation

When there is an intersection between two or more objects, people tend to perceive each object as a single uninterrupted object.

Closure

Visual connection or continuity between sets of elements which do not actually touch each other in a composition.

Symmetry

The object tend to be perceived as symmetrical shapes that form around their center.

chameleon.io

Color theory

- Colors have meaning and give context
- Contrasting colors: ~3 steps away
 - Can be used to highlight action, work well with each other
- Complementary colors: opposite
 - Increases each other's impact; good for text
- Use softer colors for non-interactables, bolder colors for interactables
- Choose a set of colors for your UI:
 - Analogous: Three in a row
 - Triadic

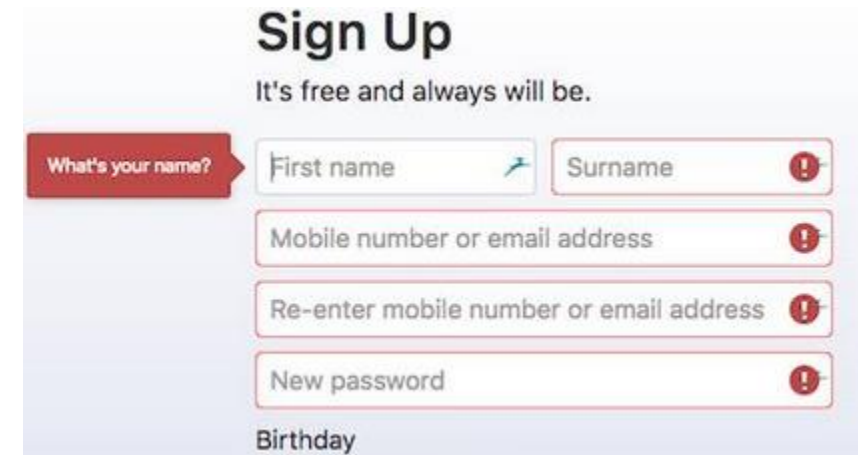

Color theory

bluleadz.com

Color theory

- Color blindness accessibility
 - Use colors, textures and symbols together
 - Use intensity
 - Especially avoid: red-green, blue-yellow
- Avoid rapidly changing colors
- Other considerations?

The image shows a screenshot of the Facebook 'Sign Up' form. The form is titled 'Sign Up' with the tagline 'It's free and always will be.' Below the title, there is a red button labeled 'What's your name?' followed by two input fields: 'First name' and 'Surname'. The 'Surname' field has a red exclamation mark icon, indicating an error. Below these are three more input fields: 'Mobile number or email address', 'Re-enter mobile number or email address', and 'New password'. Each of these three fields also has a red exclamation mark icon, indicating errors. At the bottom of the form is a 'Birthday' label. The form is designed with a light blue background and red borders around the input fields.

facebook.com

Font

- **Font** weight: heavier for emphasis
- Font `wid`th: wider fonts, monospace fonts...
- Large or **small** contrast: Large contrast conveys art/beauty
- With or without Serif
- Font choice should be consistent and UNINTRUSIVE
- Size is important too
- Famously recognizable fonts?

Learning

- The UI should also teach the user to use your product:
 - Guided tutorial
 - Tooltips, nested tooltips
 - Instructions
 - Error messages
 - Visuals
 - Helpfile/encyclopedia
- How to create a good learning curve?
 - Menu hiding/context hiding
 - Segmenting/pre-training
 - Understanding cognitive processes: memory, repetition, etc.

Learning

Warning: Potential Security Risk Ahead

Firefox detected a potential security threat and did not continue to self-signed.badssl.com. If you visit this site, attackers could try to steal information like your passwords, emails, or credit card details.

Customization

- Usability Heuristic: “Give the user control”
- Programming for high customization is difficult
- What should (or shouldn’t) be customizable:
 - UI size, text size
 - Method of interaction – input, output
 - Content
 - Button location, feature hiding

Accessibility

- Color must not be critical
- Design for screen magnifiers
- Design for screen readers (esp. websites)
 - Some types of UIs, e.g. calendars cannot interact with screen readers
 - Screen readers rely on HTML
 - Accessibility text/Alt text
 - Avoid background music
- Contrast ratio of 4.5:1

Prototyping

- Often done together with user research and negotiation
- Shows layout, arrangement, content, logic, ...
- Several prototypes may be needed
- Fidelity: how specific the prototype is, how closely it would be followed
 - Low-fidelity: representation through sketches
 - High-fidelity: usable app, “alpha”

Prototyping: Wireframes

- Wireframes are low-fidelity sketches with some general rules
- Rectangles for interface
- Rounded rectangles for buttons
- Rectangle with a cross for image, and a play button for video
- Rectangle with downward triangle for dropdown menu

Prototyping: Paper Prototyping

- Often uses wireframes
- Can show real size of objects, enable real comparison
- Can have multiple prototypes for different screen sizes
- Cheap to create

IGN

UX testing

- Not the same as focus groups
- Get representative users, perform representative tasks
 - One big study or many small studies?
- Be wary of the Hawthorne Effect (observer bias)
- Techniques in observing and listening to users
 - Let the user guide the conversation
- Competitive testing: test other products to find strengths and weaknesses

UX testing

- Qualitative vs Quantitative testing
- Behavioral vs Attitudinal testing
- Which type do the following belong to:
 - A/B testing
 - Surveys
 - Interviews
 - Usability Testing
 - Card sorting
